

Obiteljska kuća "Findri", Zagreb "Findri's" house, Zagreb

Jednoobiteljska kuća „Findri“ na zagrebačkom prigradskom području koncipirana je između vjetra i sunca, između hladnog sjevera i toploga juga, između bučne javne prometnice i mirnog privatnog vrta. Dvije strane, jedna defanzivna i zatvorena, druga transparentna i otvorena prema vanjskom prostoru, te dva kontrastna lica sadržajno su i oblikovno definirali projekt. Ova kuća želi biti zaklon i utočište, paviljon i scena ugodnog obiteljskog života za roditelje i dvije kćeri tinejdžerice.

The one-family house „Findri“, situated in the suburban Zagreb area, was drafted between the wind and the sun, between the cold north and the warm south, between a noisy public street and a quiet private garden. Two sides – one defensive and closed off, the other transparent and open towards the outer space – and the two contrasting faces defined the substance and configuration of the project. This house aims to be the shelter and the sanctuary, the pavilion and the scene of the pleasant family life.

IV, Prostorna koncepcija fakulteta

1. nastavak započete obnove

Prioriteti su uređenje predavaonice 317, povezivanje crtaonica dvostrukim prolazima (sa svake strane ploče), izvedba vješalica u crtaonicama, „elektrifikacija stolova“ i rješenje načina prezentacijskih izlaganja – sa željom da se radovi obave tijekom ovogodišnjeg ljetnog dopusta.

/Dekanski program 2007./

– S malim prostornim premještajima nekoliko kabineta, dobio se kompletan ulični potez za crtaonice na III. katu. Riječ je o 8 prostornih cjelina, što korespondira s modularnim nastave: sve crtaonice suvremeno su uređene i visoko tehnološki opremljene.

– Zamjenom prostorija s Geodetskim fakultetom dobili smo predavaonicu 318 koja je zajedno s predavaonicom 317 u cijelosti obnovljena i visoko tehnološki opremljena. Uređen je *hall III.* kata, sanitarije nastavnika, prostorije spremačica i prostor „kućne televizije“.

– U tijeku su radovi na uređenju prostora niskog prizemlja koje će biti na raspolaganju za potrebe nastavnog, znanstvenog i stručnog rada.

XIII, Maketarnica

– Osiguran je prostor, sredstva za početnu opremu i radno mjesto voditelja. U tijeku su sve predradnje kako bi se ostvarila jedna suvremena radno-nastavna aktivnost izuzetno važna za edukaciju na AF.

/Dekanski program 2009./

1. Continuation of the started restoration

The priorities are restoration of lecture hall 317, connecting the drafting rooms through double passes (on each side of the blackboard), construction of hangers in the drafting rooms, “electrification of the desks” and arranging the norms of presentation speeches – with the goal to finish the work during this year’s summer vacation.

/Dean’s program 2007/

– With small spatial transpositions of several cabinets, the drafting rooms have been formed along the street side of the building on the third floor. They represent eight spatial units which correspond with the teaching modulation: all drafting rooms are modernly furnished and technologically highly-equipped.

– Through an exchange of rooms with the Faculty of Geodesy we acquired the lecture room 318 which, together with lecture room 317, has been completely renovated and equipped with modern technology. The third floor hall has been refurbished, as well as the teacher’s sanitary facilities, the cleaning staff rooms and the “home television” space.

– There is currently ongoing work on the interior design of the basement floor which will be available for teaching, scientific and professional work.

XIII Model shop

The space, the funds for the initial equipment and the position of the operation manager have been secured. Currently ongoing are all preparatory steps for the actualization of a contemporary workshop and teaching activities essential for the education at the Faculty of Architecture.
